2025/2026 WEBINAR SERIES

RACGP CPD Approved Activity

Introduction to PHASES

Preventing Heart Attacks and Stroke Events through Surveillance

Don't miss this important initiative rolling out across Queensland in 2025–26.

PHASES is a statewide screening, recall and treatment program to strengthen the prevention and management of cardiovascular disease (CVD). It brings together clinical tools such as Primary Sense™ and the Australian CVD Risk Calculator, practice-level quality improvement support, and a consumer campaign to drive earlier intervention, optimise care, and reduce the burden of disease.

Bring your whole team — everyone has a role in improving primary health care and outcomes for patients at risk.

Featured Speaker

Professor Kim Greaves
Clinical Lead, PHASES

Cardiologist & Epidemiologist
Sunshine Coast Health

Learning Objectives

Understand the scale and impact of cardiovascular disease in Australia, including its disproportionate impact on priority populations.

Gain clarity on PHASES aims, scope and expected outcomes, including how it addresses CVD within the community.

Learn how Primary Sense™ supports early identification and optimisation of management through clinical auditing.

Identify practical steps to collaborate with your PHN on project implementation and evaluation.

Together, we're changing cardiovascular disease management and saving lives
