

General Practice Briefing Sessions

Part of the 2025/2026 webinar series

Driving Quality Improvement in General Practice

Don't miss out on this important initiative being delivered across Queensland in 2026.

PHASES is a statewide screening, recall and treatment project designed to improve the prevention and management of cardiovascular disease (CVD). It combines clinical tools such as Primary Sense™, practice-level quality improvement support, and a consumer campaign to drive earlier intervention, optimise care, and reduce the burden of disease on patients and the health system.

Join the next webinar in February — invite your team along — everyone plays a role in improving primary health care and outcomes for CVD patients.

Featured Speaker

Kari Lusk

QLD Regional Manager
Montier Health
CPM - AAPM (Certified PM)

Learning Objectives

Review the PHASES initiative and develop an understanding of the importance of a whole of practice approach to CVD prevention and management.

Explore the latest Qld PHN developed Quality Improvement toolkit to identify, intervene and manage patients at risk of cardiovascular disease.

Have a clear understanding of how to lead quality improvement activities to enhance cardiovascular disease prevention efforts.

Describe and apply evidence-based strategies and tools to identify care gaps, monitor patient progress and improve cardiovascular disease prevention.
